

Artwork / File Requirements for CUT GRAPHICS

File Formats

Vector based images: EPS, AI, PDF

Vector based images are made up of lines and curves and can be resized, and manipulated without losing the quality of the graphic. Vector graphics are defined by a series of mathematical equations and enable us to scale the object to any size without losing any detail or clarity. JPEG and TIFF files are not able to achieve this manipulation.

Artwork

***Graphics must be saved in Vector based file formats!**

When saving files with imported or linked files, make sure to check the "Include Linked Files" box if available.

Fonts

If you have a vector based file containing text please convert all fonts (type) to outlines if possible.

There are thousands of fonts, please include the name of the font. Or if can include the font file, that's even better.

***If you're not sure about these kind of files, no worries. Send what you have, and we can evaluate them for you.**
