

Mirror Shield Care & Maintenance

Congratulations on protecting your investment. We at Graffiti Shield are committed to protecting you from graffiti and wear and tear. And in doing so, we would like to point out some care and maintenance to your newly installed Mirror Shield film.

Film Dry-Out Time

During the installation process our fully trained installers have removed as much mounting solution as possible, although a small amount will remain. Trapped installation moisture can cause small water bubbles. This is normal and should be expected. Please do not attempt to pierce any water bubbles during the dry-out period. Water bubbles will eventually dissipate.

Climate Conditions & Dry-Out Time

Cold and non-sunny weather conditions can lengthen the dry-out time. Warm weather or room will shorten the dry-out time. If slow drying occurs, do not be alarmed. The trapped moisture will dry-out completely. Thicker films will always have a longer dry-out period due to the increased thickness of the film. Dry-out times can vary from a few days to as long as 60 days depending on climate condition.

Mirror Shield Care & Maintenance

To obtain maximum life from your new Mirror Shield film, the following instructions should be followed:

- **Cleaning**

Please do not clean your new film for approximately 30 days after installation. This will help secure proper curing of the special mounting adhesive to the surface.

- **Cleaning Solutions**

Most glass cleaners will work well although we recommend a foaming spray glass cleaner. This type of cleaner can be purchased thru Graffiti Shield or most retail outlets.

- **Cleaning Materials**

Always use fresh clean and soft materials to wash and dry your Mirror Shield surfaces. A soft cloth or a clean and synthetic sponge is recommended for washing the Mirror Shield followed by another clean soft cloth or soft rubber squeegee for drying. To avoid scratching the film, do not use bristle brushes, abrasive scrubbing sponges or any cleaning materials that may have been contaminated with dirt particles, as is commonly the case when washing interior and exterior windows with the same cleaning materials. Some brands of paper towels are course enough to put fine scratches in the film, even our films with a protective hard coat finish. While these scratches may be too thin to be seen at the beginning, they can damage the polished look of the film over time, and is not covered by our warranty.
